

Jose' Wilkins - Strategic Partner
Six Sigma/Reliability Consultant

With over 25 years experience in safety & occupational health, nuclear, business consulting, engineering services and manufacturing support, Jose' L. Wilkins is recognized as an subject-matter-expert in applying unique applications to define "suppressed capacity" in manufacturing facilities and improving effectiveness in process and operations management.

He has developed an improvement method that uses non-traditional statistics to characterize both safety injury and operational performance in businesses. He has shared his techniques for operational excellence both in the United States and globally that has quantified billions in potential savings for stakeholders. His expertise lies in using the basic foundational methods similar to six sigma and lean manufacturing that drives improvement in process optimization, engineering and operations management, systems procedure changes and process reliability modeling.

He has applied this approach across small businesses and large corporations in operations, maintenance, construction project and consulting management. His former employers have included DuPont, Shell Pipeline and most recently Allied Reliability.

Mr. Wilkins has recently developed some unique and required approaches for the Allied Reliability TEAM to standardize the overall reliability maturity key performance indicator for a major strategic client.

This approach is expanding to further include helping ALL clients to uncover "suppressed capacity" in existing operating assets and helps to avoid spending major capital investment before it is really needed. Some of the most recent includes:

- Business Improvements in Retail, Financial and Healthcare
- Proactive Human Capital and Safety Improvements
- Due Diligence in Capacity/Growth Planning
- Capital Affordability and Planning

Mr. Wilkins currently resides in Charlotte, NC.
