

Lean Business Simulation & Lean Executive Overview

Lean is a philosophy that creates value for the customer by minimizing waste and maximizing quality.

Lean lets customers say what is of value to them.

Lean reduces activities not adding value resulting in faster process speeds.

Faster process speed positively relates to less waste, less cost, less WIP, less complexity, higher quality and satisfied customers.

Lean can deliver top and bottom line results.

- Highly interactive workshop designed for 15-25 managers and/or employees that “touch” your product. It involves role playing, process analysis and redesign, and the application of lean techniques (kanban, value-added and non-value-added work, value stream mapping, workplace organization, the seven wastes, one-piece flow, etc)
- Participants will gain an overview of lean concepts and learn how driving out waste from their processes make the company more competitive, customer focused, and cost effective.
- 6-8 hour training session
- The workshop can be modified and delivered as a ½ day session

Lean Executive Overview

- The *Lean Executive Overview* workshop uses the LBS but has much greater emphasis on the bottom line impact of lean implementation
- 6-8 hour training session
- The workshop can be modified and delivered as a ½ day session

*The Lean Business Simulation and Lean Executive Overview are led by Willie Carter, a **Certified Lean Sensei** (teacher), with over 30 years experience as a professional quality and operations manager.*

Lean Business Simulation

Contact Nancy E. Nauman at 847-687-0701 or Willie Carter at 847-919-6127 to determine how the Lean Business Simulation or Lean Executive Overview can best support corporate profitability and revenue objectives. Email nnauman@quantumassocinc.com or wcarter@quantumassocinc.com.
