

LEAN ENTERPRISE

ONE-DAY LEAN READINESS ASSESSMENT

We help organizations focus on creating customer value by eliminating waste to achieve gains, ranging from 40% to 80%, in quality, productivity, cost reduction and customer response time.

IDENTIFY THE NEED

The correct approach to implementing Lean in your organization begins with an analysis of the business needs, opportunities and challenges. Once these opportunities are identified, we then recommend the tools that will resolve the issues. These tools might be Lean Process Improvement or Six Sigma tools. It is simply not prudent to limit the success of a lean initiative to exclude any tool if it will solve the problem at hand.

TYPICAL AGENDA

- One of our 25-year Lean Process Improvement veterans arrive at your facility by 8:00 AM
- Conduct in-depth tour of organization
- Conduct detailed product & business review
- Meet with functional groups to review systems, data used and processes
- Conduct review of management processes and KPIs
- Working lunch
- Conclude the day with discussion of preliminary findings and recommendations
